Your living landscape. Your living seas.

Evolution de l'histoire naturelle en Grande Bretagne....

Au XVIIIème siècle

Au XIXème siècle

Au XXème siècle

Au XXIème siècle...

Springwatch 2005

- Les premières trois émissions ont attiré 3.3 millions des téléspectateurs et une part de 15% de tous téléspectateurs

- Dans trois jours 100,000 demandes de fiche de renseignements “Breathing Space” (qui donne des conseils pour aider la faune) ont été reçues

- Plus de 150,000 observations des animaux, oiseaux et insectes reçues

- Dans 48 heures de la première émission 1,000 messages ont été publiés sur le site web de Springwatch

Organisation of the Biological Records Centre (BRC)

The Biological Records Centre (BRC) is jointly funded by the Joint Nature Conservation Committee (JNCC) and the Centre for Ecology and Hydrology (CEH) within the Natural Environment Research Council (NERC). JNCC and BRC staff have worked closely together to support the establishment of the national Biodiversity Network (BN) including the technical work to set up the BN Gateway as an internet portal to manage biodiversity data.

- The latest BRC report is for the period 2000 - 2006.
- You can also download the last report (BRC Report 1999 - 2001).
- Contributions are listed here.
- BRC's www.brc.gov.uk can be downloaded.
- Our data handling procedures can be viewed here.
- Advice on strategic development and the overall management of BRC is provided by the BRC Management and Advisory Group (BRCMAG).
- View a summary of our [current data holdings](http://www.brc.gov.uk).
- Read about [our data capture and storage](http://www.brc.gov.uk).
- You can read more about background and history of BRC.
- Database management - download the system for managing the BRC base of names and sites.

The workplan of BRC for 2005 to 2011 consists of the following five programmes of work:

- Supporting and developing capacity of recording schemes and volunteers.** This programme includes the fundamental and core activities of supporting the national recording schemes, helping them to acquire and manage resources for their development, and it leads to the development of the BBN. This will remain a major part of BRC's work.
- Data capture and database management.** This includes setting standards for biological recording, seeking novel types of data, including crowd-sourced data for plants, monitoring BRC data with those collected by Country Agencies and others, delivery of data via the BBN Gateway.
- Targeted surveys.** This programme involves setting up and leading targeted surveys in which there is a high training element, and which are geared to answer specific questions. There have been good examples of this approach, including the [Survey of Bryophytes on Stable Land](http://www.brc.gov.uk) carried out with the British Bryological Society.
- Analysis and interpretation.** This programme will include development of indicators, environmental data collection, compiling and editing species databases, analysing patterns of observed change.
- Communications and outreach.** This will include identifying key and species for wider recording at high profile schemes and the internet, as well as some European.
